HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

1. The Applicant's filed an Appeal Brief on July 3, 2008. After a telephonic interview with Jeffrey Urian (Attorney of Record), the Applicants have agreed to cancel claim 1.
2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeffrey Urian on August 28, 2008.

The application has been amended as follows:

Claim 1 is cancelled.

Claims 5-10, line 1; delete "claim 1," insert "claim 2."

Claim Rejections - 35 USC § 112

4. The rejections under 35 U.S.C 112, second paragraph, on claims 1, 5-10 are withdrawn because Applicant has cancelled claim 1.

Claim Rejections - 35 USC § 102

5. The rejections under 35 U.S.C 102(b), as anticipated by Cheron, on claims 1, 5-9 are withdrawn because Applicant has cancelled claim 1.

Claim Rejections - 35 USC § 103

6. The rejections under 35 U.S.C 103(a), as unpatentable by Cheron, on claim 10 are withdrawn because Applicant has cancelled claim 1.

Allowable Subject Matter

7. The following is an examiner's statement of reasons for allowance: The closest prior art to the Applicant's claimed invention is U.S Patent 4,243,731 to Cheron, U.S. Patent 6,911,277 to Skala et al. and U.S. Publication 2004/0048133 to Faris et al.

The prior art Cheron discloses a fuel cell stack (Figure 1, Component 1) with hydrogen supplying the inlets (Column 3, Lines 15-25) of the fuel cells and discharged to the outlets. Each inlet comprises a valve (Figure 8, 12a, 22a), which regulates the flow of the hydrogen (Applicant's first, second flow paths and respective valves(Components 12, 22, 32), and the hydrogen discharge joins to one flow path and a discharge valve (Applicant's third flow path and valve, Figure 8). It is inherent that hydrogen is supplied to the anode section of the fuel cell and if there are "n" numbers of fuel cells there must be also "n" numbers of cathodes. At t_0 , if all the valves are closed (components 14, 24, 34) all the anode reactant feed enters into one flow path directed

by f (Column 3-10), that is, the entire anode reactant feed will go through this same flow path.

The prior art Skala has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

The Skala reference discloses a fuel cell stack with inlets and an outlet that controls the fuel flow into and out of the fuel cell (Column 1-2, Lines 63-5). Hydrogen enters each inlet with valves (Figure 8, component 72a-72c) and exits a common discharge flow path and discharge valve (Applicant's third flow path and valve (Figure 8, Components 78 and 74e respectively). The Skala reference discloses that these are proportional valves by putting sensors at the inlets and outlets to measure the pressure drop across the fuel cell and allows the flow path to be configured accordingly (Columns 3-4, lines 65-5).

The prior art Faris et al. reference illustrates a fuel cell system having a at least one cathode section (Paragraph 2) and two anode sections (Figure 3, Components 48a and 48b) each having inlets and outlets. The fuel cell system further illustrates the two anode sections with valves at the inlets (Figure 3, Components 46a and 46b) and valves downstream of the anode outlets (Figure 3, Components 52a and 52b). The anode outlets have flow communication (Applicant's third flow path; Figure 3,

Component 50), and further comprises another third valve (Figure 3, Component 42a). Regardless of the rate at which the pump is pumping (regardless of an operational state) it would not impede on whether the first and second anode outlet streams in contact (flow communication) with each other.

However, the prior art, alone or in combination, fail to teach or fairly suggest a fourth flow path operable to supply a third anode reactant feed stream to said third flow path without said third anode reactant feed stream flowing through an anode section prior to reaching said third flow path as defined in claim 2.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
